Movirack Mobile Pallet Racking
Large-scale storage on mobile shelving units
With the Movirack system, shelving units become more compact and their storage capacity considerably increased, particularly when using pallets. All this without giving up direct access to any item in stock.

The shelving units are installed over guided mobile bases that slide laterally, thus eliminating the need for aisles, which open up only when accessed.

The operator gives the order to automatically open the unit, either by remote control or manually by flicking a switch.

The mobile bases have motors, sliders, electronics and several safety systems to guarantee a safe, efficient operation.
**Most Outstanding Advantages**

**Direct access to any pallet in storage**
As these shelving units are installed over bases, merely by opening up the corresponding aisle provides direct access to the desired pallet.

**Makes the most of your available space**
This excellent utilization of available space is thanks to two basic premises: increasing the storage capacity and reducing the storage area to build.

---

Example of a conventional pallet warehouse.

Example of a pallet warehouse using mobile bases.

The same capacity with a single aisle occupies less space.

Example of a pallet warehouse using mobile bases.

Utilizing the most space possible considerably increases storage capacity.

---

Example of a conventional pallet warehouse.
Applications
Here we can see some examples of its multiple applications:

Palletized product storage
- General storage,
- products with average or low-level rotation,
- refrigerated storerooms,
- intermediary or shipping warehouses.
Warehouse with cantilever shelves
- For sheets, reels, and large or irregular-sized products.

In these cases, the same utilization criteria for palletized products is applied.

Conventional forklifts can be used (reach trucks) alternatively ones specially used for lengthy products (lateral load or four-way fork lifts).
Refrigerated Storerooms

The Movirack System is ideal for low or medium-height refrigerated or freezer storerooms, as:

- Being a compact system, its investment is quickly recovered.

- Every pallet can be directly accessed: very useful when there are few pallets per item.

- The energy savings are increased in terms of generating cold air. The air is spread over a larger number of pallets in storage, thus reducing the expense per pallet.

- There is better air circulation in down times when using the parking option, which increases the separation between shelves to spread the aisle space more equidistantly.

- With the parking option, if enough space is available, aisles can be used to pick individual items from the lower shelves.

- The use of a conventional forklift allows for direct access from the dock area to different points on the shelving unit.
Basic Components
**Shelves**
1. Chassis
2. Girder and mechanical safety lock
3. Anchorage and fasteners
4. Vertical brace
5. Horizontal brace
6. Base fasteners
7. Brackets (optional)

**Mobile bases**
8. Carrier roller / Carrier driver
9. Carrier guide
10. Carrier end
11. Base girder
12. Rigidity bracing
13. Motor
14. Cable channel
15. Drive shaft

**Safety and control parts**
16. Exterior main power panel
17. On-board control panel
18. Parking panel
19. Signal and power cables
20. Remote control antenna
21. Remote control
22. Control button pad
23. Exterior safety barrier
24. Interior safety barrier and proximity photocell
25. Reset button
26. Emergency button

**Built-in tracks**
27. Roller tracks
28. Guide track
Building Systems

Built-in tracks
The moving shelving units travel over tracks which first have been leveled, fastened together and then sunk into the floor.

There are smooth tracks and guide tracks that match to the wheels on the carrier. The number of tracks depends on the characteristics of each facility.

They can be installed in many different ways.

Over a concrete subfloor.
This system is most often used over a newly built floor.
Over an existing floor with posterior fill. Appropriate when the floor has adequate resistance but new flooring is to be laid.

Over an existing floor with channels and spreader beams. Appropriate when the floor resistance is insufficient or undetermined.

Over an existing floor with channels. Valid when the floor can handle the units without compromising its resistance.
Shelves

Facilities tend to be formed by fixed shelving units with access either on one side or both sides, or by mobile shelving units that always have access on both sides.

Both types have structural systems that are the same as convention pallet shelving units.

However, mobile shelving units must be equipped with rigidity bracing that provide them with better stability to withstand the forces produced by starting and stopping their movement.

There can be levels set for two, three or four pallets, depending on the size and load to be stored.

This figure shows the measurements and tolerance allowed in the direction of displacement.

Dimensions in mm
One-side access aisle

Most facilities require a single main aisle to maneuver in, so the shelving units are located perpendicular to it with a minimum distance from the sidewalls of 200 mm.

Access aisle plus pedestrian walkway

When necessary, or for safety reasons, the module closest to the wall can be cantilevered to leave the space below free for a pedestrian walkway or a fire escape route.
Basic Components for Cantilevered Shelving Units

The structural system, guides and embedment systems, in addition to operational criteria and tolerance factors, are similar to facilities with palletized shelving units.
Shelves
1. Single deep column
2. Cantilever baser
3. Double deep column
4. Cantilever arm
5. Set of vertical braces
6. Anchorage or fasteners

Mobile bases
7. Carrier roller / drive carrier
8. Base girder
9. Rigidity bracing
10. Motor
11. Cable channel
12. Set of base brackets

Safety and control parts
13. Exterior main power panel
14. On-board control panel
15. Signal and power cables
16. Remote control antenna
17. Remote control
18. Control button pad
19. Exterior safety barrier
20. Interior safety barrier and proximity photocell
21. Reset button
22. Emergency button

Built-in tracks
23. Roller tracks
24. Guide track
**Controlling the Facility**

The basic features of the control system are found in the main power panel and the on-board control panels. These ensure the mobile shelving units move safely and automatically.

The principal control features found in the panel are:

- The PLC controller, the brains behind the facility and where the operational logic is programmed.
- Power converters (synchronize the operations of the different motors on the base, which provide a boost of acceleration and a smooth stop). These also lengthen the lifespan of several different components (motors, wheels, guides, etc.).
- Error control screen.
- Aisle lighting panel (optional).

**Remote control**

Controls opening/closing and can reset the system without having to get down from the forklift.

**Safety devices**

The many built-in safety devices conform to current safety standards and guarantee the mobile equipment are operated safely. Some of these include:

- Exterior safety barrier

Exterior safety barrier

When open during operations in the aisle, anyone passing through the work aisle, either on foot on in the forklift, will automatically cut the power to the shelving units, impeding their movement.

It can only be reset manually by pressing the reset button located at the top of the aisle or by remote control, once the safety protocol has been applied.

This ensures that there are no operators working inside.
Interior safety barrier
On either side of the bases are longitudinal optic safety barriers which cover the entire front of the mobile shelving unit. In event of an emergency, the bases can be stopped if the beam of light is interrupted, with your foot for example. What’s more, this barrier detects the presence of foreign objects in the aisle which may impede safe operation.

Proximity photocell
This ensures a smooth, safe stop at the pre-programmed separation distance.

Reset buttons
These are located at the top of the aisle.

Emergency buttons
These are located in the on-board control panels and can stop the moving shelves in an emergency.
Mecalux’s Easy WMS platform optimises the physical and documentary management of product flows, ensuring traceability and multiplying throughput in all warehouse operations: goods receipt, storage, order preparation and dispatch. This platform’s multi-level functionalities are suitable for any installation, regardless of size or sector.

Easy WMS has an extensive range of modules that cover all supply chain management needs.

**Advantages**
- Receive real-time stock control
- Lower logistics costs
- Increase storage capacity
- Reduce handling tasks
- Eliminate errors
- Get precise, high-speed picking
- Adapt to new e-commerce needs
- Manage omnichannel operations
- Achieve a fast ROI

**Warehouse Management System (WMS)**
Versatile and flexible software capable of managing — with the same degree of efficiency — manual, mixed and fully-automated installations. Optimise physical and documentary management of flows of goods, from their entry in the warehouse to their dispatch, guaranteeing total traceability.

Mecalux works with leading suppliers that attest to the quality, reliability and technical level of the Easy WMS platform:
Interconnected solutions for your supply chain

**WMS for Ecommerce** supplements Easy WMS to manage the various storage scenarios required to pick orders for your online shop. Our solutions will make your warehouse more competitive and able to deal with the distribution of products sold online.

**Multi Carrier Shipping Software** adds advanced WMS functionalities to manage operations related to packaging and labelling. Plus, you can use it to communicate with the major carriers automatically.

**Store Fulfillment** has been designed for companies that need real-time control over inventory in their warehouses and physical shops. Additionally, it synchronises provisioning operations — such as picking, replenishment, transfers between shops, and returns — throughout the distribution network.

**Marketplaces & Ecommerce Platforms** synchronises the stock in your physical warehouse with that of your online sales catalogue. This module automates communication between logistics activities and virtual shops. The coordination of online sales with the WMS lets you combine management of the various digital sales channels and focus on providing agile, efficient logistics services.

**Value-Added Services (VAS)** integrates the value-added tasks carried out in your installation with Easy WMS. This module simplifies the work of operators, as they receive step-by-step instructions at their workstations. Thus, productivity increases, and, notably, errors made during operations decrease. This module ensures maximum agility and the elimination of additional costs relating to product personalisation in the warehouse.

**WMS & Pallet Shuttle Integration** comprises a single user-interface to run the WMS and the high-density Pallet Shuttle system, enabling users to easily control the Pallet Shuttles. This operation is integrated with the other warehouse fulfilment tasks.

**WMS for Manufacturing** provides efficiency and traceability and creates value in manufacturing processes. It integrates production-line supply processes with products put away and later shipped out.

**Supply Chain Analytics Software** ensures fast, simple viewing of the different supply chain indicators, giving you first-hand knowledge of the tasks being carried out. Gain better control over your business and decision-making by keeping up to date with operational information.

**Labor Management System (LMS)** records real-time task performances and compares these to the estimated time standards for each operation.
