

Easy WMS | Warehouse Management System

The software that transforms warehousing to simplify management and boost productivity

Easy WMS is a robust, versatile, omnichannel warehouse management system with multi-owner and multi-warehouse capabilities. With cloud or on-premise deployment options, the software features an intuitive, user-friendly interface available in 14 languages. Designed to manage medium-size and large facilities,

Easy WMS adapts to scenarios of varying complexity, from logistics centres with manual operations to hybrid and fully automated warehouses. This solution guarantees total real-time inventory traceability, reduces errors drastically and increases productivity, ensuring a rapid return on investment.

Benefits

- **Smart warehouse management**

Intelligent location assignment, task sequencing and automated information flow minimise the risk of error. Additionally, these capabilities provide real-time inventory visibility and expedite key intralogistics processes such as receiving, order fulfilment and shipping.

- **Easy integration with other systems**

Easy WMS integrates with the main ERP programs on the market as well as multiple automated storage and retrieval systems (AS/RSS) and robotic intralogistics solutions. These include stacker cranes, pallet shuttle and pick/put-to-light systems, picking robots, automated guided vehicles (AGVs) and autonomous mobile robots (AMRs).

- **Flexible, scalable implementation**

The cloud model's microservices architecture allows for continuous updates and improvements without downtime. Moreover, only the required functionalities are deployed, with the flexibility to expand as needed.

- **Innovation, AI and continuous updating**

Easy WMS continually evolves through new features, regular updates and technologies such as generative AI and predictive analytics. Designed entirely by warehousing experts, this future-proof solution is backed by a leading global intralogistics solutions provider with over 60 years of experience.

With Easy WMS, businesses obtain up to:

60% improvement in operational productivity

40% increase in storage capacity

99% error elimination

The WMS that covers all warehouse operations

1. Receiving. Verifies that stock received matches that expected. Additionally, it allows for capturing the logistics attributes of products and checking their condition upon arrival.

2. Cross-docking. Enables the direct allocation of received goods to outgoing orders requiring them without having to store the products on racking.

3. Putaway. Consistently recommends the optimal location for storing items. It does this based on strategies configured according to product type, turnover, stock ownership, storage area, assigned location prioritisation and other criteria.

4. Replenishment. Efficiently coordinates flows of goods from storage locations to picking positions. This capability ensures a continuous supply of products for order fulfilment.

5. Inventory counting and management. Supports multiple stocktaking methods for accurate inventory control of stored goods.

6. Picking and packing. Optimises order fulfilment operations, from picking to product labelling and packing.

7. Shipping. Automates the management of dispatch tasks, such as container loading confirmation and monitoring of vehicle loading.

8. Supply Chain Analytics. Segments and structures the multiple data generated by daily warehouse operations and turns them into actionable insights for strategic decision-making and productivity improvements. It provides a wide range of standard reports based on the main logistics KPIs and can be customised to create analyses tailored to business needs.

Easy WMS modules

Multi-Carrier Shipping Software

WMS for Manufacturing

Labor Management System (LMS)

Yard Management System (YMS)

Slotting for WMS

Store Fulfillment

WMS for 3PL

Marketplace Integration

WMS for Automation & Robotics

Value-Added Services (VAS)

Why choose Mecalux Software Solutions?

60+ years of experience in warehousing solutions, with operations in **70+ countries**

500+ engineers exclusively dedicated to developing logistics and supply chain software

1,200+ facilities in **36 countries** managed with Mecalux software solutions

Software continuously developed and updated through major R&D investments

Multilingual technical support available **24/7, 365 days** a year
